

# INFINITY Aerospace Military Style Stick Grip Pin Call-Out

Do NOT mount this assembly directly to a flat metal surface!  
 Doing so will cause shorting across the bottom of the PC board!!

Shown is a SPDT, center OFF switch. This is typical for a Trim, Flaps, or Speed Brake(s) switch. If the C1A+ contact is made, then motor terminal C1A will be at 12 volts and C1B will remain at GROUND. If the C1B+ terminal is made then C1B will = 12V and C1A will = GND.

Motor and Supply wires are 16 - 20 gauge.  
 The switch/signal wires can be 20 -- 22 gauge.
